

## **Post Implementation Evaluation Report**

### **Statewide Aerial Photo Basemap DOQQ - Administration**

Project Dates: 2/2002 through 6/2004

Project Cost: \$1,136,797

#### Project Objectives:

The objective of the project was to acquire current and accurate aerial photography for the entire State of Kansas to supplement the geospatial database holdings. The business case involved determining the appropriate standards to be used both for collection of the imagery and production of the orthographic rectified images known as Digital Ortho Photo Quads (DOQQs), delivering those products to the project sponsors, and then making the products readily available to all users of such data through the Data Access and Support Center at the University of Kansas, Kansas Geologic Survey.
